

# #1 Network Auto MX™ Automatic Mixer

## Never Mix Film Developer Again!

For ease-of-use and batch-to-batch consistency, nothing beats the Auto MX specific gravity-controlled automatic chemical mixer. With a tank capacity of 12.5 gallons, Auto MX is large enough to meet the demands of your busiest processor, but small enough to fit almost anywhere. It measures 16" D x 24" W x 32.5" H and takes up only 2.7 square feet of floor space! Audible and visible alarms let you know when either a low or high level condition exists – what could be simpler? And since there are no moving parts to wear out, the Auto MX is the perfect low maintenance work horse that will save you time and money.

When used with #1 Network 2100 Developer, Auto MX offers the flexibility of mixing at 1:2 or 1:4 dilution. Each mixer comes with two developer-specific gravity floats preset and color coded. The 1:2 dilution is ideal for processors running scanner, image setting, and camera 2000 type films. A 1:4 developer dilution is perfect for use in processors running conventional rapid access films.

The fixer side of the Auto MX is calibrated for #1 Network 3100 Fixer at a 1:3 dilution.

### Auto MX™

provides batch-to-batch consistency, and is the perfect low maintenance work horse for saving time and money.

Auto MX™ 2100 Developer  
Cat. no. 28010-49      4 x 1.25 gallons

Auto MX™ 3100 Fixer with Hardener  
Cat. no. 28017-49 ..... 4 x 1 gallon

## Centralized mixing system for large volume users

RAM-C Mixer

The RAM-C™ when used in conjunction with #1 Network Rapid Developer and Fixer Concentrate in thirty or fifty-five gallon drums, feeds up to six processors from one central location. The microprocessor controller automatically ensures perfectly mixed chemicals, batch after batch.

### Features and Benefits:

- Saves time and money without sacrificing image quality
- Float switch monitors each chemical and water tank
- Alarm sounds when low tank level is detected
- Feeds up to six processors
